## Contents

Preface ix

Chapter 1. Introduction 1

Chapter 2. Wigner Matrices and Their Generalizations 7

Chapter 3. Eigenvalue Density 11
  3.1. Wigner Semicircle Law and Other Canonical Densities 11
  3.2. The Moment Method 12
  3.3. The Resolvent Method and the Stieltjes Transform 14

Chapter 4. Invariant Ensembles 17
  4.1. Joint Density of Eigenvalues for Invariant Ensembles 17
  4.2. Universality of Classical Invariant Ensembles via Orthogonal Polynomials 20

Chapter 5. Universality for Generalized Wigner Matrices 29
  5.1. Different Notions of Universality 29
  5.2. The Three-Step Strategy 31

Chapter 6. Local Semicircle Law for Universal Wigner Matrices 33
  6.1. Setup 33
  6.2. Spectral Information on \( S \) 35
  6.3. Stochastic Domination 37
  6.4. Statement of the Local Semicircle Law 38
  6.5. Appendix: Behavior of \( \Gamma \) and \( \tilde{\Gamma} \) and the Proof of Lemma 6.3 40

Chapter 7. Weak Local Semicircle Law 45
  7.1. Proof of the Weak Local Semicircle Law, Theorem 7.1 45
  7.2. Large-Deviation Estimates 57

Chapter 8. Proof of the Local Semicircle Law 61
  8.1. Tools 61
  8.2. Self-Consistent Equations on Two Levels 64
  8.3. Proof of the Local Semicircle Law Without Using the Spectral Gap 67

Chapter 9. Sketch of the Proof of the Local Semicircle Law Using the Spectral Gap 79
