Preface	xv
Chapter 1. Background Material on Rings and Modules	1
§1. Rings and Modules	1
1.1. Categories and Functors	2
1.2. Progenerator Modules	5
1.3. Exercises	8
1.4. Nakayama's Lemma	9
1.5. Exercise	11
1.6. Module Direct Summands of Rings	11
1.7. Exercises	13
§2. Polynomial Functions	14
2.1. The Ring of Polynomial Functions on a Module	14
2.2. Resultant of Two Polynomials	15
2.3. Polynomial Functions on an Algebraic Curve	19
2.4. Exercises	21
§3. Hom and Tensor	23
3.1. Tensor Product	23
3.2. Exercises	27
3.3. Hom Groups	29
3.4. Hom Tensor Relations	33
3.5. Exercises	36
§4. Direct Limit and Inverse Limit	37
4.1. The Direct Limit	38
4.2. The Inverse Limit	40
4.3. Inverse Systems Indexed by Nonnegative Integers	42

4.4. Exercises	45
§5. The Morita Theorems	47
5.1. Exercises	52
Chapter 2. Modules over Commutative Rings	53
§1. Localization of Modules and Rings	53
1.1. Local to Global Lemmas	54
1.2. Exercises	57
§2. The Prime Spectrum of a Commutative Ring	58
2.1. Exercises	63
§3. Finitely Generated Projective Modules	65
3.1. Exercises	68
§4. Faithfully Flat Modules and Algebras	70
4.1. Exercises	74
§5. Chain Conditions	75
5.1. Exercises	78
§6. Faithfully Flat Base Change	80
6.1. Fundamental Theorem on Faithfully Flat Base Change	80
6.2. Locally Free Finite Rank is Finitely Generated Projective	83
6.3. Invertible Modules and the Picard Group	85
6.4. Exercises	88
Chapter 3. The Wedderburn-Artin Theorem	91
§1. The Jacobson Radical and Nakayama's Lemma	91
1.1. Exercises	94
§2. Semisimple Modules and Semisimple Rings	94
2.1. Simple Rings and the Wedderburn-Artin Theorem	97
2.2. Commutative Artinian Rings	100
2.3. Exercises	102
§3. Integral Extensions	103
§4. Completion of a Linear Topological Module	106
4.1. Graded Rings and Graded Modules	110
4.2. Lifting of Idempotents	112
Chapter 4. Separable Algebras, Definition and First Properties	115
§1. Separable Algebra, the Definition	115
1.1. Exercises	119
§2. Examples of Separable Algebras	120
§3. Separable Algebras Under a Change of Base Ring	123
§4. Homomorphisms of Separable Algebras	127

4.1. Exercises	133
§5. Separable Algebras over a Field	137
5.1. Central Simple Equals Central Separable	137
5.2. Unique Decomposition Theorems	140
5.3. The Skolem-Noether Theorem	143
5.4. Exercises	144
§6. Commutative Separable Algebras	146
6.1. Separable Extensions of Commutative Rings	146
6.2. Separability and the Trace	148
6.3. Twisted Form of the Trivial Extension	152
6.4. Exercises	153
§7. Formally Unramified, Smooth and Étale Algebras	155
Chapter 5. Background Material on Homological Algebra	159
§1. Group Cohomology	159
1.1. Cocycle and Coboundary Groups in Low Degree	161
1.2. Applications and Computations	163
1.3. Exercises	170
§2. The Tensor Algebra of a Module	173
2.1. Exercises	176
§3. Theory of Faithfully Flat Descent	177
3.1. The Amitsur Complex	177
3.2. The Descent of Elements	178
3.3. Descent of Homomorphisms	180
3.4. Descent of Modules	181
3.5. Descent of Algebras	186
§4. Hochschild Cohomology	188
§5. Amitsur Cohomology	191
5.1. The Definition and First Properties	191
5.2. Twisted Forms	195
Chapter 6. The Divisor Class Group	199
§1. Background Results from Commutative Algebra	200
1.1. Krull Dimension	200
1.2. The Serre Criteria for Normality	201
1.3. The Hilbert-Serre Criterion for Regularity	202
1.4. Discrete Valuation Rings	204
§2. The Class Group of Weil Divisors	206
2.1. Exercises	210
§3. Lattices	213
3.1. Definition and First Properties	213

3.2.	Reflexive Lattices	216
3.3.	A Local to Global Theorem for Reflexive Lattices	222
3.4.	Exercises	224
§4.	The Ideal Class Group	226
4.1.	Exercises	232
§5.	Functorial Properties of the Class Group	233
5.1.	Flat Extensions	233
5.2.	Finite Extensions	235
5.3.	Galois Descent of Divisor Classes	236
5.4.	The Class Group of a Regular Domain	238
5.5.	Exercises	242
Chapter 7.	Azumaya Algebras, I	243
§1.	First Properties of Azumaya Algebras	243
§2.	The Commutator Theorems	249
§3.	The Brauer Group	252
§4.	Splitting Rings	254
4.1.	Exercises	258
§5.	Azumaya Algebras over a Field	258
§6.	Azumaya Algebras up to Brauer Equivalence	263
6.1.	Exercises	266
§7.	Noetherian Reduction of Azumaya Algebras	267
7.1.	Exercises	273
§8.	The Picard Group of Invertible Bimodules	274
8.1.	Definition of the Picard Group	274
8.2.	The Skolem-Noether Theorem	279
8.3.	Exercise	280
§9.	The Brauer Group Modulo an Ideal	281
9.1.	Lifting Azumaya Algebras	284
9.2.	The Brauer Group of a Commutative Artinian Ring	286
Chapter 8.	Derivations, Differentials and Separability	287
§1.	Derivations and Separability	287
1.1.	The Definition and First Results	287
1.2.	A Noncommutative Binomial Theorem in Characteristic p	291
1.3.	Extensions of Derivations	292
1.4.	Exercises	294
1.5.	More Tests for Separability	296
1.6.	Locally of Finite Type is Finitely Generated as an Algebra	301
1.7.	Exercises	301

§2. Differential Crossed Product Algebras	303
2.1. Elementary p -Algebras	305
§3. Differentials and Separability	308
3.1. The Definition and Fundamental Exact Sequences	308
3.2. More Tests for Separability	312
3.3. Exercises	316
§4. Separably Generated Extension Fields	317
4.1. Emmy Noether's Normalization Lemma	320
4.2. Algebraic Curves	323
§5. Tests for Regularity	325
5.1. A Differential Criterion for Regularity	325
5.2. A Jacobian Criterion for Regularity	326
Chapter 9. Étale Algebras	329
§1. Complete Noetherian Rings	329
§2. Étale and Smooth Algebras	336
2.1. Étale Algebras	336
2.2. Formally Smooth Algebras	339
2.3. Formally Étale is Étale	346
2.4. An Example of Raynaud	346
§3. More Properties of Étale Algebras	348
3.1. Quasi-finite Algebras	348
3.2. Exercises	350
3.3. Standard Étale Algebras	350
3.4. Theorems of Permanence	353
3.5. Étale Algebras over a Normal Ring	355
3.6. Topological Invariance of Étale Coverings	357
3.7. Étale Neighborhood of a Local Ring	359
§4. Ramified Radical Extensions	361
4.1. Exercises	364
Chapter 10. Henselization and Splitting Rings	367
§1. Henselian Local Rings	368
1.1. The Definition	368
1.2. Henselian Noetherian Local Rings	376
1.3. Exercises	379
§2. Henselization of a Local Ring	380
2.1. Henselization of a Noetherian Local Ring	381
2.2. Henselization of an Arbitrary Local Ring	384
2.3. Strict Henselization of a Noetherian Local Ring	385
2.4. Exercises	387

§3. Splitting Rings for Azumaya Algebras	387
3.1. Existence of Splitting Rings (Local Version)	387
3.2. Local to Global Lemmas	391
3.3. Splitting Rings for Azumaya Algebras	394
§4. Cech Cohomology	395
4.1. The Definition	396
4.2. The Brauer group and Amitsur Cohomology	398
Chapter 11. Azumaya Algebras, II	407
§1. Invariants Attached to Elements in Azumaya Algebras	407
1.1. The Characteristic Polynomial	408
1.2. Exercises	412
1.3. The Rank of an Element	412
§2. The Brauer Group is Torsion	414
2.1. Applications to Division Algebras	417
§3. Maximal Orders	419
3.1. Definition, First Properties	419
3.2. Localization and Completion of Maximal Orders	422
3.3. When is a Maximal Order an Azumaya Algebra?	424
3.4. Azumaya Algebras at the Generic Point	426
3.5. Azumaya Algebras over a DVR	428
3.6. Locally Trivial Azumaya Algebras	430
3.7. An Example of Ojanguren	431
3.8. Exercises	434
§4. Brauer Groups in Characteristic p	436
4.1. The Brauer Group is p -divisible	437
4.2. Generators for the Subgroup Annihilated by p	439
4.3. Exercises	442
Chapter 12. Galois Extensions of Commutative Rings	445
§1. Crossed Product Algebras, the Definition	445
§2. Galois Extension, the Definition	447
2.1. Noetherian Reduction of a Galois Extension	456
§3. Induced Galois Extensions and Galois Extensions of Fields	456
§4. Galois Descent of Modules and Algebras	459
§5. The Fundamental Theorem of Galois Theory	462
5.1. Fundamental Theorem for a Connected Galois Extension	463
5.2. Exercises	466
§6. The Embedding Theorem	468
6.1. Embedding a Separable Algebra	468
6.2. Embedding a Connected Separable Algebra	470

§7. Separable Polynomials	473
7.1. Exercise	478
§8. Separable Closure and Infinite Galois Theory	478
8.1. The Separable Closure	478
8.2. The Fundamental Theorem of Infinite Galois Theory	483
8.3. Exercises	484
§9. Cyclic Extensions	486
9.1. Kummer Theory	486
9.2. Artin-Schreier Extensions	491
9.3. Exercises	492
Chapter 13. Crossed Products and Galois Cohomology	497
§1. Crossed Product Algebras	498
§2. Generalized Crossed Product Algebras	501
2.1. Exercises	512
§3. The Seven Term Exact Sequence of Galois Cohomology	513
3.1. The Theorem and Its Corollaries	513
3.2. Exercises	520
3.3. Galois Cohomology Agrees with Amitsur Cohomology	521
3.4. Galois Cohomology and the Brauer Group	523
3.5. Exercise	525
§4. Cyclic Crossed Product Algebras	525
4.1. Symbol Algebras	528
4.2. Cyclic Algebras in Characteristic p	528
4.3. The Brauer Group of a Henselian Local Ring	530
4.4. Exercises	531
§5. Generalized Cyclic Crossed Product Algebras	532
§6. The Brauer Group of a Polynomial Ring	541
6.1. The Brauer Group of a Graded Ring	544
6.2. The Brauer Group of a Laurent Polynomial Ring	545
6.3. Examples of Brauer Groups	546
6.4. Exercises	552
Chapter 14. Further Topics	557
§1. Corestriction	557
1.1. Norms of Modules and Algebras	561
1.2. Applications of Corestriction	566
1.3. Corestriction and Galois Descent	568
1.4. Corestriction and Amitsur Cohomology	571
1.5. Corestriction and Galois Cohomology	577
1.6. Corestriction and Generalized Crossed Products	581

1.7. Exercises	583
§2. A Mayer-Vietoris Sequence for the Brauer Group	584
2.1. Milnor's Theorem	585
2.2. Mayer-Vietoris Sequences	591
2.3. Exercises	598
§3. Brauer Groups of Some Nonnormal Domains	599
3.1. The Brauer Group of an Algebraic Curve	600
3.2. Every Finite Abelian Group is a Brauer Group	601
3.3. A Family of Nonnormal Subrings of $k[x, y]$	602
3.4. The Brauer Group of a Subring of a Global Field	605
3.5. Exercises	612
Acronyms	615
Glossary of Notations	617
Bibliography	621
Index	631
