Foreword	xi
Notation	xiii
Acknowledgements	xiv
Chapter 1. Elementary Prime Number Theory, I	1
§1. Introduction	1
§2. Euclid and his imitators	2
§3. Coprime integer sequences	3
§4. The Euler-Riemann zeta function	4
§5. Squarefree and smooth numbers	9
§6. Sledgehammers!	12
§7. Prime-producing formulas	13
§8. Euler's prime-producing polynomial	14
§9. Primes represented by general polynomials	22
§10. Primes and composites in other sequences	29
Notes	32
Exercises	34
Chapter 2. Cyclotomy	45
§1. Introduction	45
§2. An algebraic criterion for constructibility	50
§3. Much ado about $\mathbf{Z}[\zeta_p]$	52
§4. Completion of the proof of the Gauss–Wantzel theorem	55
§5. Period polynomials and Kummer's criterion	57

§6. A cyclotomic proof of quadratic reciprocity	61
§7. Jacobi's cubic reciprocity law	64
Notes	75
Exercises	77
Chapter 3. Elementary Prime Number Theory, II	85
§1. Introduction	85
§2. The set of prime numbers has density zero	88
§3. Three theorems of Chebyshev	89
§4. The work of Mertens	95
§5. Primes and probability	100
Notes	104
Exercises	107
Chapter 4. Primes in Arithmetic Progressions	119
§1. Introduction	119
§2. Progressions modulo 4	120
§3. The characters of a finite abelian group	123
§4. The L -series at $s = 1$	127
§5. Nonvanishing of $L(1, \chi)$ for complex χ	128
§6. Nonvanishing of $L(1, \chi)$ for real χ	132
§7. Finishing up	133
§8. Sums of three squares	134
Notes	139
Exercises	141
Chapter 5. Interlude: A Proof of the Hilbert–Waring Theorem	151
§1. Introduction	151
§2. Proof of the Hilbert–Waring theorem (Theorem 5.1)	152
§3. Producing the Hilbert–Dress identities	156
Notes	161
Chapter 6. Sieve Methods	163
§1. Introduction	163
§2. The general sieve problem: Notation and preliminaries	169
§3. The sieve of Eratosthenes–Legendre and its applications	170
§4. Brun's pure sieve	175
§5. The Brun–Hooley sieve	182

§6. An application to the Goldbach problem	196
Notes	201
Exercises	202
Chapter 7. An Elementary Proof of the Prime Number Theorem	213
§1. Introduction	214
§2. Chebyshev's theorems revisited	217
§3. Proof of Selberg's fundamental formula	221
§4. Removing the explicit appearance of primes	224
§5. Nevanlinna's finishing strategy	231
Notes	235
Exercises	237
Chapter 8. Perfect Numbers and their Friends	247
§1. Introduction and overview	248
§2. Proof of Dickson's finiteness theorem	253
§3. How rare are odd perfect numbers?	255
§4. The distribution function of $\sigma(n)/n$	259
§5. Sociable numbers	263
Notes	267
Exercises	269
References	279
Index	301
