## Contents

**Preface** ix  

### 1 Vector Spaces  1  
1.1 Sets and Logic  1  
1.2 Basic Definitions  10  
1.3 Properties of Vector Spaces  14  
1.4 Subtraction and Cancellation  19  
1.5 Euclidean Spaces  23  
1.6 Matrices  31  
1.7 Function Spaces  35  
1.8 Subspaces  43  
1.9 Lines and Planes  50  
   Project: Quotient Spaces  59  
   Project: Vector Fields  61  
   Summary: Chapter 1  63  
   Review Exercises: Chapter 1  64  

### 2 Systems of Linear Equations  67  
2.1 Notation and Terminology  67  
2.2 Gaussian Elimination  77  
2.3 Solving Linear Systems  84  
2.4 Applications  91  
   Project: Numerical Methods  96  
   Project: Further Applications of Linear Systems  97  
   Summary: Chapter 2  99  
   Review Exercises: Chapter 2  100  

### 3 Dimension Theory  103  
3.1 Linear Combinations  104  
3.2 Span  110  
3.3 Linear Independence  119  
3.4 Basis  128  
3.5 Dimension  131  
3.6 Coordinates  140  
   Project: Infinite-Dimensional Vector Spaces  147  
   Project: Linear Codes  148  
   Summary: Chapter 3  149  
   Review Exercises: Chapter 3  150  

## Contents

8 **Eigenvalues and Eigenvectors** 333  
  8.1 Definitions 333  
  8.2 Similarity 339  
  8.3 Diagonalization 346  
  8.4 Symmetric Matrices 353  
  8.5 Systems of Differential Equations 360  
    Project: Graph Theory 371  
    Project: Numerical Methods for Eigenvalues and Eigenvectors 373  
  Summary: Chapter 8 374  
  Review Exercises: Chapter 8 375  

**Hints and Answers to Selected Exercises** 379  

**Index** 415
