Preface \hspace{1cm} ix 
    Preview \hspace{1cm} x 
    Prerequisites \hspace{1cm} xiii 
    Further topics \hspace{1cm} xiii 
    Suggested reading pathways \hspace{1cm} xiv 

Acknowledgements \hspace{1cm} xv 

Chapter 1. The Market \hspace{1cm} 1 
    §1.1. Probabilistic setup \hspace{1cm} 1 
    §1.2. Assets and investment \hspace{1cm} 9 
    §1.3. Proportional investment \hspace{1cm} 16 
    §1.4. Relative performance \hspace{1cm} 22 
    §1.5. Functional generation of stock portfolios \hspace{1cm} 30 

Notes and Complements \hspace{1cm} 38 

Chapter 2. Numéraires and Market Viability \hspace{1cm} 41 
    §2.1. Supermartingale numéraires \hspace{1cm} 42 
    §2.2. Market viability \hspace{1cm} 51 
    §2.3. Optimality properties of supermartingale numéraires \hspace{1cm} 66 
    §2.4. The local martingale numéraire for stock portfolios \hspace{1cm} 81 
    §2.5. Capital Asset Pricing Model \hspace{1cm} 87 

Notes and Complements \hspace{1cm} 93
Chapter 3. Financing, Optimization, Maximaliy

§3.1. Optional Decomposition

§3.2. Financing

§3.3. Contingent claims; Completeness

§3.4. Utility Maximization

§3.5. Maximaliy

Notes and Complements

Chapter 4. Ramifications and Extensions

§4.1. Drawdown-constrained investment

§4.2. Simple trading and semimartingales

§4.3. Models with infinitely many assets

Notes and Complements

Appendix A. Elements of Functional and Convex Analysis

§A.1. A minimax theorem

§A.2. The space $\mathbb{L}^0$

§A.3. Concave optimization and duality on $\mathbb{L}_+^0$

§A.4. The space $\mathbb{L}^\infty$

§A.5. Reproducing kernel Hilbert space

Notes and Complements
