Preface ix  
Organization of the Text x  
Acknowledgments x  

Chapter 1. Vector Spaces over a Field $\mathbb{K}$  
1.1. Vector Spaces 1  
Basic Properties and Examples 1  
Multivariate Polynomials and Multi-Index Notation 4  
Row Space and Column Space of a Matrix 7  
1.2. Vector Subspaces 7  
Systems of Linear Equations and Their Solutions 8  
$M(n,\mathbb{R})$ and Other Spaces of Matrices 11  
1.3. Solving Matrix Equation $A\mathbf{x} = \mathbf{b}$ 12  
Elementary Operations and Echelon Form of $A\mathbf{x} = \mathbf{b}$ 13  
The Homogeneous Equation $A\mathbf{x} = \mathbf{0}$ 16  
Solving Inhomogeneous Equations $A\mathbf{x} = \mathbf{b}$ 17  
Determining the Linear Span of a Set of Vectors 18  
Implicit and Parametric Descriptions of Vector Subspaces 19  
More on Elementary Row and Column Operations 20  
1.4. Linear Span, Independence, and Bases 21  
Existence and Construction of Bases 21  
The Dimension $\dim(V)$ of a Vector Space 24  
Implicit and Parametric Description of Subspaces (Revisited) 26  
The Lagrange Interpolation Formula 29  
Rank of a Matrix: Row Rank vs. Column Rank 30  
1.5. Quotient Spaces $V/W$ 31  
Algebraic Structure in $V/W$ 32  
Finding Bases in $V/W$ and the Dimension Formula 34  
Additional Exercises 38  

Appendix: The Degree Formula for $K[x_1, \ldots, x_N]$ 46  

Chapter 2. Linear Operators $T : V \to W$ 49  
2.1. Definitions and General Facts 49  
Dimension Theorems for Kernel $K(T)$ and Range $R(T)$ 51  
Computing $K(T)$ and $R(T)$ 53  
2.2. Isomorphisms and Invariant Subspaces 56  
Eigenvalues, Eigenspaces, and the Characteristic Polynomial $p_T(x)$ 56  
Decomposition of Operators 57

Chapter 5. The Diagonalization Problem 139
  5.1. Eigenvalues, Characteristic Polynomial, and Spectrum 139
    Factoring Polynomials 141
    Fundamental Theorem of Algebra 142
    The Quadratic Formula 144
  5.2. Eigenvalues and the Characteristic Polynomial 145
    Finding the Eigenspaces of \( T : V \to V \) 147
    Example: Rotation Matrices in \( \mathbb{R}^2 \) 150
    The Case of Distinct Eigenvalues 152
  5.3. Diagonalization and Limits of Operators 153
    Norms on Finite-Dimensional Spaces 153
    Multiplicative Properties of Norms on Matrix Space 154
    The Operator Norm \( \|T\|_{\text{op}} \) on Linear Operators and Matrices 155
    Equivalence of Norms on Finite-Dimensional Spaces 157
    Practical Calculations with Matrix Norms 158
    Convergence of Sequences and Series in Matrix Space 158
    Properties of Matrix Norms 159
  5.4. Application: Computing the Exponential \( e^A \) of a Matrix 160
    The Cauchy Convergence Criterion in Matrix Space 161
    Convergence of the Exponential Series 162
    Explicit Computation of \( e^A \) 162
  5.5. Application: Linear Systems of Differential Equations 165
    Example: Solving \( \frac{dx}{dt} = Ax \) 167
  5.6. Application: Matrix-Valued Geometric Series 169
    Convergence of Matrix-Valued Power Series 170
    Small Perturbations of Invertible Matrices 171
    Geometric Series for Nilpotent \( N \) 172
    Additional Exercises 172

Chapter 6. Inner Product Spaces 181
  6.1. Basic Definitions and Examples 181
    Euclidean Norms on \( \mathbb{R}^n \) and \( \mathbb{C}^n \) 182
    The Cauchy-Schwarz Inequality 184
    Hilbert-Schmidt Norm 186
    Polarization Identity 187
    Orthonormal Bases in Inner Product Spaces 187
    Bessel's Inequality 188
  6.2. Orthogonal Complements and Projections 190
    Orthogonal Projections on Inner Product Spaces 190
    The Gram-Schmidt Construction 192
    The Legendre Polynomials 195
    Fourier Series Expansions 196
    A Geometry Problem 199
  6.3. Adoints and Orthonormal Decompositions 200
    Diagonalization vs. Orthogonal Diagonalization 200
    Dual Spaces of Inner Product Spaces 201
The Adjoint Operator $T^* : W \to V$ 202
Linear Projections vs. Orthogonal Projections 204
Adjoint $T^*$ vs. Transpose $T^T$ 206
Computing an Operator Adjoint 206
Self-Adjoint, Unitary, and Normal Operators 207
6.4. Diagonalization in Inner Product Spaces 209
Orthogonal Diagonalization 209
Schur Normal Form 209
Diagonalizing Self-Adjoint and Normal Operators 212
Unitary Equivalence of Operators vs. Similarity 216
The Matrix Groups $U(n), SU(n), O(n), SO(n)$ 219
Change of Orthonormal Basis 221
Diagonalization over $\mathbb{K} = \mathbb{C}$: A Summary 222
6.5. Reflections, Rotations, and Rigid Motions on $\mathbb{R}^n$ 222
The Group of Rigid Motions $M(n)$ 223
Reflections on Inner Product Spaces 224
Euler’s Theorem: Rotations on $\mathbb{R}^3$ 226
Further Comments on Euler 228
6.6. Spectral Theorem for Vector and Inner Product Spaces 229
Spectral Theorem 230
Functions of Operators: $e^T$ and $\sqrt{T}$ Revisited 234
Computing a Spectral Decomposition 236
Determining the Spectral Projections $P_\lambda$ 237
6.7. Positive Operators and Polar Decomposition 239
Positive Square Roots 240
Polar Decompositions $T = UP$ (Invertible $T$) 241
Computing the Polar Decomposition for Invertible $T : V \to W$ 243
The Singular Value Decomposition 244
Computing a Singular Value Decomposition 245
The General Polar Decomposition 246
Additional Exercises 248
Index 257
