# Table of Contents for CONM/705

## Representations of Algebras

- Commutative algebraic groups up to isogeny. II  
  by Michel Brion
- Noncommutative resolutions of discriminants  
  by Ragnar-Olaf Buchweitz; Eleonore Faber; Colin Ingalls
- Polyhedral models for tensor product multiplicities  
  by Jiarui Fei
- Special multiserial algebras, Brauer configuration algebras and more: A survey  
  by Edward L. Green; Sibylle Schroll
- Nakayama-type phenomena in higher Auslander-Reiten theory  
  by Gustavo Jasso; Julian Külshammer
- K-polynomials of type A quiver orbit closures and lacing diagrams  
  by Ryan Kinser
- Krull-Gabriel dimension and the Ziegler spectrum  
  by Rosanna Laking
- On the $K$-theory of weighted projective curves  
  by Helmut Lenzing
- Finite-dimensional algebras arising as blocks of finite group algebras  
  by Markus Linckelmann
- Kronecker modules generated by modules of length 2  
  by Claus Michael Ringel
- Noetherian properties in representation theory  
  by Steven V Sam
- Thick tensor ideals of right bounded derived categories of commutative rings  
  by Ryo Takahashi
- Stability, shards, and preprojective algebras  
  by Hugh Thomas
- Computations and applications of some homological constants for polynomial representations of $GL_n$  
  by Antoine Touzé
