| List of Tables                                     | xi   |
| Preface to the Second Edition                      | xiii |
| Acknowledgements                                   | xv   |
| Preface to the First Edition                       | xvii |
| Chapter 1. Preliminaries                           | 1    |
| §1.1. The Pigeonhole Principle                     | 3    |
| §1.2. Ramsey's Theorem                             | 6    |
| §1.3. Some Notation                                | 9    |
| §1.4. Three Classical Theorems                     | 11   |
| §1.5. A Little More Notation                       | 14   |
| §1.6. Exercises                                    | 17   |
| §1.7. Research Problems                            | 20   |
| §1.8. References                                   | 21   |
| Chapter 2. Van der Waerden's Theorem               | 23   |
| §2.1. The Compactness Principle                    | 27   |
| §2.2. Alternate Forms of van der Waerden's Theorem | 29   |
| §2.3. Computing van der Waerden Numbers            | 31   |

---

|            |  |     |
|------------|--|-----|
| §2.4.      | Bounds on van der Waerden Numbers                      | 38  |
| §2.5.      | The Erdős and Turán Function                           | 47  |
| §2.6.      | On the Number of Monochromatic Arithmetic Progressions | 51  |
| §2.7.      | Proof of van der Waerden's Theorem                     | 53  |
| §2.8.      | Exercises  | 57  |
| §2.9.      | Research Problems                                      | 59  |
| §2.10.     | References   | 62  |
| Chapter 3. | Supersets of $AP$                                      | 67  |
| §3.1.      | Quasi-Progressions                                     | 68  |
| §3.2.      | Generalized Quasi-Progressions                         | 77  |
| §3.3.      | Descending Waves                                       | 81  |
| §3.4.      | Semi-Progressions                                      | 83  |
| §3.5.      | Iterated Polynomials                                   | 92  |
| §3.6.      | Arithmetic Progressions as Recurrence Solutions        | 102 |
| §3.7.      | Exercises  | 104 |
| §3.8.      | Research Problems                                      | 107 |
| §3.9.      | References   | 111 |
| Chapter 4. | Subsets of $AP$  | 113 |
| §4.1.      | Finite Gap Sets  | 115 |
| §4.2.      | Infinite Gap Sets                                      | 121 |
| §4.3.      | Exercises  | 140 |
| §4.4.      | Research Problems                                      | 142 |
| §4.5.      | References   | 145 |
| Chapter 5. | Other Generalizations of $w(k; r)$                     | 147 |
| §5.1.      | Sequences of Type $x, ax + d, bx + 2d$                 | 147 |
| §5.2.      | Homothetic Copies of Sequences                         | 163 |
| §5.3.      | Sequences of Type $x, x + d, x + 2d + b$               | 168 |
| §5.4.      | Polynomial Progressions                                | 175 |
| §5.5.      | Exercises  | 177 |

---

|  |     |
|--|-----|
| §5.6. Research Problems                                  | 179 |
| §5.7. References   | 181 |
| Chapter 6. Arithmetic Progressions (mod $m$ )            | 183 |
| §6.1. The Family of Arithmetic Progressions (mod $m$ )   | 184 |
| §6.2. A Seemingly Smaller Family is More Regular         | 187 |
| §6.3. The Degree of Regularity                           | 193 |
| §6.4. Exercises  | 196 |
| §6.5. Research Problems                                  | 198 |
| §6.6. References   | 200 |
| Chapter 7. Other Variations on van der Waerden's Theorem | 203 |
| §7.1. The Function $\Gamma_m(k)$                         | 203 |
| §7.2. Monochromatic Sets $a(S + b)$                      | 207 |
| §7.3. Having Most Elements Monochromatic                 | 209 |
| §7.4. Permutations Avoiding Arithmetic Progressions      | 213 |
| §7.5. Exercises  | 217 |
| §7.6. Research Problems                                  | 217 |
| §7.7. References   | 219 |
| Chapter 8. Schur's Theorem                               | 221 |
| §8.1. The Basic Theorem                                  | 222 |
| §8.2. A Generalization of Schur's Theorem                | 234 |
| §8.3. Refinements of Schur's Theorem                     | 239 |
| §8.4. Schur Inequality                                   | 243 |
| §8.5. Exercises  | 245 |
| §8.6. Research Problems                                  | 247 |
| §8.7. References   | 248 |
| Chapter 9. Rado's Theorem                                | 251 |
| §9.1. Rado's Single Equation Theorem                     | 251 |
| §9.2. Some Rado Numbers                                  | 268 |
| §9.3. Generalizations of the Single Equation Theorem     | 279 |

---

|  |     |
|--|-----|
| §9.4. Solutions to Linear Recurrences                    | 285 |
| §9.5. Mixing Addition and Multiplication                 | 287 |
| §9.6. Exercises  | 290 |
| §9.7. Research Problems                                  | 292 |
| §9.8. References   | 294 |
| Chapter 10. Other Topics                                 | 297 |
| §10.1. Monochromatic Sums                                | 297 |
| §10.2. Doublefree Sets                                   | 302 |
| §10.3. Diffsequences                                     | 303 |
| §10.4. Brown's Lemma                                     | 318 |
| §10.5. Monochromatic Sets Free of Prescribed Differences | 321 |
| §10.6. Patterns in Colorings                             | 326 |
| §10.7. Rainbow Ramsey Theory on the Integers             | 328 |
| §10.8. Zero-Sums and $m$ -Sets                           | 334 |
| §10.9. Exercises   | 345 |
| §10.10. Research Problems                                | 346 |
| §10.11. References                                       | 349 |
