Preface	xi
List of Symbols	xv
<b>Part 1. From Volterra to Banach</b>	
Chapter 1. Starting Out	3
§1.1. A vector space	3
§1.2. A linear transformation	4
§1.3. Eigenvalues	6
§1.4. Spectrum	8
§1.5. Volterra spectrum	9
§1.6. Volterra powers	11
§1.7. Why justify our “formal calculation”?	13
§1.8. Uniform convergence	14
§1.9. Geometric series	16
Notes	19
Chapter 2. Springing Ahead	21
§2.1. An initial-value problem	21
§2.2. Thinking differently	24

---

§2.3. Thinking linearly	25
§2.4. Establishing norms	26
§2.5. Convergence	28
§2.6. Mass-spring revisited	32
§2.7. Volterra-type integral equations	35
Notes	35
Chapter 3. Springing Higher	37
§3.1. A general class of initial-value problems	37
§3.2. Solving integral equations of Volterra type	39
§3.3. Continuity in normed vector spaces	41
§3.4. What's the resolvent kernel?	45
§3.5. Initial-value problems redux	49
Notes	51
Chapter 4. Operators as Points	53
§4.1. How "big" is a linear transformation?	54
§4.2. Bounded operators	56
§4.3. Integral equations done right	61
§4.4. Rendezvous with Riemann	63
§4.5. Which functions are Riemann integrable?	67
§4.6. Initial-value problems à la Riemann	69
Notes	73
<b>Part 2. Travels with Titchmarsh</b>	
Chapter 5. The Titchmarsh Convolution Theorem	81
§5.1. Convolution operators	81
§5.2. Null spaces	84
§5.3. Convolution as multiplication	86
§5.4. The One-Half Lemma	89
Notes	95

Chapter 6. Titchmarsh Finale	97
§6.1. The Finite Laplace Transform	97
§6.2. Stalking the One-Half Lemma	99
§6.3. The complex exponential	103
§6.4. Complex integrals	105
§6.5. The (complex) Finite Laplace Transform	107
§6.6. Entire functions	108
Notes	111

**Part 3. Invariance Through Duality**

Chapter 7. Invariant Subspaces	115
§7.1. Volterra-Invariant Subspaces	115
§7.2. Why study invariant subspaces?	117
§7.3. Consequences of the VIST	123
§7.4. Deconstructing the VIST	126
Notes	131

Chapter 8. Digging into Duality	133
§8.1. Strategy for proving Conjecture $C_0$	133
§8.2. The “separable” Hahn-Banach Theorem	136
§8.3. The “nonseparable” Hahn-Banach Theorem	144
Notes	149

Chapter 9. Rendezvous with Riesz	155
§9.1. Beyond Riemann	155
§9.2. From Riemann & Stieltjes to Riesz	160
§9.3. Riesz with rigor	162
Notes	169

Chapter 10. V-Invariance: Finale	173
§10.1. Introduction	173
§10.2. One final reduction!	174
§10.3. Toward the Proof of Conjecture U	175

---

§10.4. Proof of Conjecture U	178
Notes	180
Appendix A. Uniform Convergence	183
Appendix B. Complex Primer	185
§B.1. Complex numbers	185
§B.2. Some Complex Calculus	187
§B.3. Multiplication of complex series	188
§B.4. Complex power series	190
Appendix C. Uniform Approximation by Polynomials	195
Appendix D. Riemann-Stieltjes Primer	199
Notes	211
Bibliography	213
Index	217
