Preface ix

Part 1. Differential Equations and Expressions 1

Chapter 1. First Order Systems 3
  1. Introduction 3
  2. Existence and Uniqueness of Solutions 3
  3. Variation of Parameters 8
  4. The Gronwall Inequality 8
  5. Bounds and Extensions to the Endpoints 10
  6. Continuous Dependence of Solutions on the Problem 12
  7. Differentiable Dependence of Solutions on the Data 14
  8. Adjoint Systems 20
  9. Inverse Initial Value Problems 21
  10. Comments 22

Chapter 2. Quasi-Differential Expressions and Equations 25
  1. Introduction 25
  2. Classical Symmetric Expressions 25
  3. Quasi-Derivative Formulation of the Classical Expressions 26
  4. General Quasi-Differential Expressions 27
  5. Quasi-Differential Equations 29
  6. Comments 30

Chapter 3. The Lagrange Identity and Maximal and Minimal Operators 31
  1. Introduction 31
  2. Adjoint and Symmetric Expressions 31
  3. The Lagrange Identity 34
  4. Maximal and Minimal Operators 35
  5. Boundedness Below of the Minimal Operator 38
  6. Comments 40

Chapter 4. Deficiency Indices 41
  1. Introduction 41
  2. The Deficiency Index Continued 45
  3. Powers of Differential Expressions and Their Deficiency Index 47
  4. Complex Parameter Decompositions of the Maximal Domain 52
  5. Comments 57
CONTENTS

Part 2. Symmetric, Self-Adjoint, and Dissipative Operators 59

Chapter 5. Regular Symmetric Operators 61
  1. Introduction 61
  2. Boundary Conditions and Boundary Matrices 61
  3. Characterization of Symmetric Domains 62
  4. Examples of Symmetric Operators 66
  5. Comments 68

Chapter 6. Singular Symmetric Operators 69
  1. Introduction 69
  2. Singular Boundary Conditions 69
  3. Symmetric Domains and Proofs 70
  4. Symmetric Domain Characterization with Maximal Domain Functions 75
  5. Comments 79

Chapter 7. Self-Adjoint Operators 81
  1. Introduction 81
  2. LC Solutions and Real Parameter Decompositions of the Maximal Domain 82
  3. A Real Parameter Characterization of Self-Adjoint Domains 89
  4. The Maximal Deficiency Cases 91
  5. Boundary Conditions for the Friedrichs Extension 93
  6. Comments 96

Chapter 8. Self-Adjoint and Symmetric Boundary Conditions 97
  1. Introduction 97
  2. Separated Conditions 98
  3. Separated, Coupled, and Mixed Conditions 101
  4. Examples and Construction for All Types 105
  5. Symmetric Boundary Conditions 112
  6. Comments 117

Chapter 9. Solutions and Spectrum 119
  1. Introduction 119
  2. Only One Singular Endpoint 120
  3. Two Singular Endpoints 124
  4. Comments 127

Chapter 10. Coefficients, the Deficiency Index, Spectrum 129
  1. Introduction 129
  2. An Algorithm for the Construction of the Maximal Deficiency Index 130
  3. Discreteness Conditions 131
  4. Comments 135

Chapter 11. Dissipative Operators 137
  1. Introduction 137
  2. Concepts for Complex Symplectic Geometry Spaces 137
  3. Finite Dimensional Complex Symplectic Spaces and Their Dissipative Subspaces 139
CONTENTS

4. Applications of Symplectic Geometry to Ordinary Differential Operators 143
5. LC Representation of Dissipative Operators 149
6. Symplectic Geometry Characterization of Symmetric Operators 155
7. Comments 156

Part 3. Two-Interval Problems 157
Chapter 12. Two-Interval Symmetric Domains 159
1. Introduction 159
2. Two-Interval Minimal and Maximal Operators 161
3. Two-Interval Symmetric Domains 162
4. Discontinuous Symmetric and Self-Adjoint Boundary Conditions 168
5. Examples 172
6. Comments 179

Chapter 13. Two-Interval Symmetric Domain Characterization with Maximal Domain Functions 181
1. Introduction and Main Theorem 181
2. Comments 186

Part 4. Other Topics 187
Chapter 14. Green’s Function and Adjoint Problems 189
1. Introduction 189
2. Adjoint Matrices and Green’s Functions for Regular Systems 189
3. Green’s Functions of Regular Scalar Boundary Value Problems 193
4. Regularization of Singular Problems 196
5. Green’s Functions of Singular Boundary Value Problems 198
6. Construction of Adjoint and Self-Adjoint Boundary Conditions 200
7. The Green’s Function of the Legendre Equation 206
8. Comments 211

Chapter 15. Notation 213

Chapter 16. Topics Not Covered and Open Problems 215
1. Topics Not Covered 215
2. Open Problems 218

Bibliography 219

Index 249
