Preface ix

List of Figures xiii

Chapter 1. Background material 1
  1.1. Notation and conventions 1
  1.2. Mappings 1
  1.3. Quasisymmetric invariants 8
  1.4. Dimensions and measures 9
  1.5. Notes 17

Chapter 2. Conformal gauges and conformal dimension 21
  2.1. Conformal gauges 21
  2.2. Conformal dimension 22
  2.3. Notes 24

Chapter 3. Gromov hyperbolic groups and spaces and their boundaries 25
  3.1. The real hyperbolic plane and \text{CAT}(\kappa) \ spaces 25
  3.2. Gromov hyperbolic metric spaces 26
  3.3. Boundaries of rank one symmetric spaces 30
  3.4. Gromov hyperbolic groups 40
  3.5. Boundaries of hyperbolic buildings 43
  3.6. Notes 45

Chapter 4. Lower bounds for conformal dimension 49
  4.1. Rich curve families and lower bounds for conformal dimension 49
  4.2. The Loewner condition and examples of spaces minimal for
        conformal dimension 55
  4.3. The conformal dimension of the Sierpiński carpet 58
  4.4. Annular LLC implies conformal dimension bounded away from
        one 61
  4.5. Rich families of sets of conformal dimension one 62
  4.6. Notes 64

Chapter 5. Sets and spaces of conformal dimension zero 67
  5.1. Conformal dimension, porosity and uniform disconnectedness 67
  5.2. Conformal dimension and unions 71
  5.3. Conformal dimension and products 73
# CONTENTS

5.4. Tukia’s example 77  
5.5. Notes 78  

Chapter 6. Gromov–Hausdorff tangent spaces and conformal dimension 79  
6.1. Tangent spaces and lower bounds for conformal Assouad dimension 79  
6.2. Lowering the conformal Assouad dimension 82  
6.3. Notes 89  

Chapter 7. Ahlfors regular conformal dimension 91  
7.1. David–Semmes deformation theory 91  
7.2. Cannon’s conjecture and Ahlfors regular conformal dimension 92  
7.3. $\ell^p$ cohomology of graphs 93  
7.4. Dynamics of post-critically finite rational maps on $S^2$ 97  
7.5. Notes 104  

Chapter 8. Global quasiconformal dimension 107  
8.1. Distortion of dimension by quasiconformal maps 107  
8.2. Minimality for global quasiconformal dimension and middle interval Cantor sets 108  
8.3. Global quasiconformal dimensions of self-similar sets 109  
8.4. Conformal dimensions of self-affine sets 115  
8.5. Sets with global quasiconformal dimension zero 122  
8.6. Notes 125  

Bibliography 131
